SUMMARY

Results-driven Automation & Controls Engineer and manufacturing quality professional specializing in industrial automation, Operational Technology (OT) platforms, Building Management Systems (BMS), and software architecture within highly regulated GxP / GMP environments. Combines an interdisciplinary foundation across Information Technology (IT) and Computer Science (CS) to bridge physical plant machinery and complex software systems. Proven expertise in PLC/DCS architectures, SCADA design (Ignition, AVEVA), full-stack microservices development, cloud deployment, and data-integrity compliance across pharmaceutical and industrial manufacturing lines.

SKILLS

- Automation & Control Systems: PLC (Allen-Bradley, Siemens), DCS (DeltaV), SCADA (Ignition, FactoryTalk View, AVEVA), HMI Development, Vision Sensors, Sterile Fill-Finish Lines
- Programming & Configuration: Rockwell Studio 5000, RSLogix 500/5000, Ladder Logic, Structured Text, Python, JavaScript, Java (Spring Boot, Hibernate), SQL
- MES & Digital Systems: Syncade, MasterControl, Electronic Batch Records (EBR), Recipe Authoring, MES-DCS Integration, MES Transactions
- Validation & Compliance: GMP, GxP, 21 CFR Part 11, GAMP 5, IQ/OQ/UAT, FAT/SAT, Change Control, CAPA, Data Integrity, System Risk Assessment
- Batch & Process Standards: ISA S88, ISA S95, Batch Process Design, Recipe Management, Process Optimization
- Networking/Integration: OPC, Ethernet/IP, Industrial Networks, System Integration, SQL Server (ODBC/DSN Connectivity), Data Historians (OSI PI)
- Building & Utility Systems: BAS/BMS (Siemens Desigo, Insight), Environmental Monitoring Systems (EMS), Cleanroom Systems, Process Equipment Integration
- Troubleshooting & Maintenance: Root Cause Analysis (RCA), PLC/SCADA Diagnostics, I/O & Communication Failures, Preventive Maintenance
- Software & Cloud Infrastructure: Microservices Architecture, RESTful & SOAP Web Services, Docker, Jenkins, Git, AWS, Azure, CI/CD Pipelines, JUnit, Mockito

EXPERIENCE

Jubilant HollisterStier | Spokane, WA (On-Site)

Automation Engineer Jun 2026 - Present

- Develop custom Ignition SCADA modules using Python and JavaScript scripting to automate data processing from vision sensors and generate dynamic operator dashboards for real-time plant monitoring.
- Design and implement an automated quality control system integrating Rockwell PLCs with AVEVA SCADA for centralized monitoring and real-time visualization of inspection metrics.
- Direct the integration, programming, and troubleshooting of control systems with sterile fill-finish lines, managing automated workflows across laboratory and pharmaceutical manufacturing environments.
- Configure and validate ODBC and DSN connectivity between OT applications and SQL Server databases to support Environmental Monitoring Systems (EMS) and OT data capture on filling lines.
- Integrate automation systems with SQL Server databases for production data logging, compliance reporting, and Manufacturing Execution System (MES) transactions while executing structured system risk assessments.

Source Sphere LLC | Edison, NJ (Hybrid)

Software Engineer Nov 2025 - Jun 2026

- Architected, developed, and deployed scalable Java-based applications and microservices using Spring Boot and Hibernate, linking core CS algorithms with resilient IT infrastructure.
- Designed and integrated high-performance RESTful and SOAP-based web services to optimize application communication and UI integration with frontend engineering teams.
- Managed end-to-end data modeling, schema design, and complex query development utilizing MySQL, PostgreSQL, and MongoDB, maintaining data integrity and performance standards.
- Drove CI/CD workflows by contributing to automated pipelines using Jenkins, Git, and Docker across AWS and Azure cloud platforms.
- Guided the full Software Development Lifecycle (SDLC), ensuring code reliability through JUnit and Mockito unit testing, peer code reviews, and performance tuning.

Andhra Pradesh State Skill Development Corporation (APSSDC) | Andhra Pradesh, India

Intern - Industrial Automation & Controls Apr 2019 - Apr 2020

- Gained hands-on exposure to manufacturing industry ecosystems, industrial automation workflows, embedded microcontrollers, and production line lifecycles.
- Developed a foundational understanding of industrial control logic, including how Programmable Logic Controllers (PLCs) interface with supervisory software architectures to manage plant-floor equipment.
- Studied manufacturing documentation standards, safety regulations, and data tracking methods used to ensure precision and operational continuity in production environments.
- Participated in cross-functional technical workshops aimed at deploying hardware-software integrations, sharpening troubleshooting, technical analysis, and systems validation capabilities.

EDUCATION**Master of Science (M.S.) in Computer Science**

Pace University - Seidenberg School of CS & IS, New York, NY (GPA: 3.55 / 4.0) Sep 2023 - May 2025
